

AD Report Guidelines

1. Executive summary of your AD project, what is your project all about (1-2 pages)
2. Software Design Document (SDD diagram, check your SDLC)
3. Problem statement, what problem you wanted to solve using your AD (More problems you include the better)
 - a. Stakeholder analysis (who will be using the project, why they should use your project)
 - b. User requirements (what do they need to use your project)
 - c. System requirements
4. Risk review + solution to the risk

Diagrams

5. Use Case Diagram (the one that looks like stickman)
6. ER Diagram
7. Three tier system architecture (CLIENT, SERVER, DATABASE)
8. DFD Diagram (Level 0, level 1)
9. Flowchart
10. Wireframes (Figma)

3.0 Development

11. What software do you use to develop the project? Why you choose it?
12. What might be other laternative software to develop the project
13. What are the backend technologies being used?
14. What are the frontend technologies being used?
15. Development methodologies. What SDLC model did you choose to develop the project?

Break it down

16. Version control. How did you know, if your project is updated/outdated? - github, gitlab
17. How did you test your project?

- a. Find a tester(general tester, professional tester)
- b. User acceptance testing checklist
